Automotive Testing Expo**

*New Trade Fair Center,
Booth C1015*

Stuttgart, Germany

TEMA Partner Meeting

We are very happy to let you know that the TEMA Partner Meeting that took place on the 27th and the 28th of May, in Linköping and the surrounding Swedish archipelago was a huge success. Thanks a lot to all participating partners. The discussions will be shared with all our partners in a document that covers all topics brought up. We hope to see even more participants next time.

Crash Test Expo

Do not hesitate to visit us in the upcoming Crash Test Expo in Stuttgart. You have the opportunity to see the new possibilities with the latest TEMA release and discuss any upcoming projects where you need our support. We will be present in booth C1015.

TEMA 3.3 Release

Image Systems is happy to announce the release of TEMA 3.3! There are some excellent, new features that will be a great improvement to the product:

Lens Calibration – A new Lens Calibration feature will be included for FREE with every full TEMA Motion and Automotive purchased. Will dramatically improve the accuracy in 2D and 3D tests.

General Usability – Tracking optimization, improved image handling, user interface updates.

Relative Orientation – Perform your camera orientation directly from two camera views, without a surveyed target (e.g. a cage). This feature will simplify the test procedure for all 3D users.

Presentational Improvements – New diagram features for extended presentational possibilities.

For detailed info, please request the Release Notes for TEMA 3.3.

UPDATE

New distributor

We are happy to announce and welcome a new partner for sales of the TEMA software, Measuring Instruments Technology in South Africa.
